Sequence 10728, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR PALING DATE: 2000-10-20

PRIOR PLILNG DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

Tracey KJ,

New isolated polypeptide having a vertebrate HMG A box, useful for inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.

Example 4; Page 45; 82pp; English.

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-

                         cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's disease, peritonitis, heparitis, asthma, allergy, immune complex disease, sinusitis, bronchitis, emphysema, HV infection, candidiasis, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, meningitis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMGI (also termed as HMGBI) B box
naturally occurring HMG A box inhibits the release of a pro-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic; gene therapy; vaccine; pharmaceutical composition; HMGB B box, high mobility group; immune response; immunostimulation; cancer; human; high mobility group box 1; HMG1; cytokine activity; INF stimulating; tumour necrosis factor stimulating.

immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of tumour necrosis factor

```
The invention relates to a polypeptide comprising a high mobility group box procein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that considering along the HMGB box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an a patient comprises administering to the patient an amount of the collypeptide. The polypeptide. The ploopistion and methods are cuseful in treating obesity and conditions characterised by activation of an oplypeptide. The polypeptide characterised by activation of an inflammatory cytokine cascade, e.g. sepsis, allograft rejection,
                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; high mobility group box 1 B box; HMGB1 B box; HMGB; HMGB A box; hmMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatoid arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancreatitis; peritonitis; burn; myocardial ischaemia; organic ischaemia; reperfusion ischaemia; Behcet's disease; graft-versus-host disease; Crohn's disease; cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Human high mobility group box 1 (HMGB1) B box protein active fragment #2.
(TNF) stimulating peptide based on amino acids 1-20 of the human high mobility group box 1 (HMG1) protein.
                                                                                                                                            Gaps

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs tremed HMG A box and HMG B box. HMG A box or a non-naturally occurring HMG A box inhibites the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual. This is the amino acid sequence of a human high mobility group box 1 (HMG1) B box mutant.
           sinustiis, bronchitis, emphysema, HIV infection, candidasis, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocardial ischaemia, meningitis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMGI (also termed as HMGBI)
                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytostatic; gene therapy; vaccine; pharmaceutical composition;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant, stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMG1) B box biologically active fragment.

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinfilammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinfilammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obsesty in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMP biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obseity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obseity and conditions characterised by activation of a polypeptide. The polypeptides antibodies, composition and methods are useful in treating obseity and conditions characterised by activation of

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B confitoring weight loss or treating obesity in a patient, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMP biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine caccade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an another activation of an activation of an activation and methods are useful in treating obesity and conditions characterised by activation of an activation of an activation and methods are useful an amount of the patient an amount of the patient and activation of an activation of an activation of an activation and methods are activation of an a

The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has been the antibody response to the administered antigen. HMGB1 polypeptide comprising a vertebrate the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immune puppressive fragment of the vertebrate or non-natural HMGB A box. The immune comprises administering the administration of a non-human antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of individual, or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune pathology, inhibiting an immune pathology, inhibiting an immune pathology, inhibiting an individual or decreasing an immune response to an administered non-human antigen comprise administering a Wertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural A box.

Comprises administering a HMGB polypeptide comprising a vertebrate HMGB A comprises administering an attoimmune disease is allergy, comprise and a vertebrate or non-naturally-occurring HMGB B cox. The HMGB polypeptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, uncertaint a the C-terminus. The autoimmune disease is allergy, uncertaint a disease, asthem, rheumatoid arthritis, culorasis or systemic lupus erythemates uncertaint of the B box of human HMGILIO, a HMGB protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein 1 (HWGB1, also known as high mobility group.) or HWG1, when administered with an antigen, diminishes the antibody response to the administered antigen. HWGB1 has 2 DNA binding motific, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HWGB polypeptide comprising a vertebrate HWGB A box, or an immunesuppressive box, a non-naturally-occurring HWGB A box, or an immunesuppressive pathology is induced by the administration of a non-human antigen, nonself material (e.g. a cell or tissue such as bone marrow cells) or self material (e.g. a cell or tissue such as bone marrow cells) or adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of protecting a subject against an immune pathology, inhibiting an immune pathology in individual or decreasing an immune response to an administered non-human antigen comprise administering a HWGB polypeptide comprising a vertebrate HWGB A box, a non-naturally-occurring HWGB A box,

                                                                                                                                                                                                                                                                       용
```

```
A claimed method of treating an autoimmune disorder in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, a non-naturally-occurring HMGB A box, or an immunosuppressive
                                                                                                                                                                                                                                                                                                                                                                            ö
or an immunosuppressive fragment of the vertebrate or non-natural A box.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, temethods of detecting and/or identifying an agent that binds to an HMGB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antibody or its antigen-binding fragment specific to a vertebrate high mobility group box (HMGB) A box that inhibits release of a proinflammatory cytokine from a cell treated with HMGB protein, useful
                                                                                  fragment of these, and a vertebrate or non-naturally-occurring HMGB B box. The HMGB polypoptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, psoriasis or systemic lupus erythematosus (all claimed). The present sequence is that of a mutated B box of human, mouse and rat HMGBI proteins ADY85326-ADY85327, which was produced in an example from the

that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB colypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine caseade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB hox but does not specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB correction. A method of treating a condition characterized by activation of an inflammatory cytokine caseade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult crespiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1. An identical

invention provides antibodies, or their antigen-binding fragments,

```
The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-naturally occurring HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatory cytokine cascade such as endotoxic shock, rheumatorid arthritis, appendictis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, bronchitis, emphysema, HIV infection, candidasis, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, dermatitis, and prosential infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMG1 (also termed as HMGB1)
   cytokine
inhibiting a condition associated with an activated inflammatory cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.

New pharmaceutical composition comprises a polypeptide comprising an HMGB box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.

Example 1; SEQ ID NO 19; 68pp; English.

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for

The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its

CC detecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HWGB protein or an antibody that binds to the protein, an agent that inhibits TNF biological activity and a method of treating a condition in a patient characterised by activation of an conflammatory cytokine cascade. Effecting weight loss or treating obesity of in a patient comprises administering to the patient an amount of the colypeptide. The polypeptide, antibodies, composition and methods are conseful in treating obesity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepsis, allograft rejection, can inflammatory cytokine cascade, e.g. sepsis, allograft rejection, controucive pulmonary disease, psoriasis, pancreating, crownic obstructive pulmonary disease, psoriasis, pancreating, contronic obstructive a disease, graft-versus-host disease, Crohn's disease, CC ulcerative colitis, multiple sclerosis or cachexia. This sequence correption of the invention.

F;2-215/Product: nonhistone chromosomal protein HMG-1 #status experimental <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 4
S01947
nonhistone chromosomal protein HMG-1 - bovine
NyAlternate names: 33K protein; high-mobility-group protein HMG-1
C;Species: Bos primigenius taurus (cattle)
C;Date: 30-Sep-1989 #sequence_revision 22-Apr-1995 #text_change 09-Jul-2004

ADAR897

Nonhistone chromosomal protein HMG-1 - pig

C;Species: Sus scrofa domestica (domestic pig)

C;Species: Sus scrofa domestica (domestic pig)

C;Accession: A28897

R;Tsuda, K; Kikuchi, M.; Mori, K.; Waga, S.; Yoshida, M.

Biochemistry 27, 6159-6163, 1988

A;Title: Primary structure of non-histone protein HMG1 revealed by the nucleotide sequent A;Reference number: A28897; MUID:89050965; PMID:3191113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Molecule type: mRNA

bi61510

high mobility group protein 1 - African clawed frog (fragment)

c;Species: Xenopus laevis (African clawed frog)

C;Date: 28-Oct-1994 #sequence_revision 28-Oct-1994 #text_change 09-Jul-2004

C;Accession: D61510

C;Accession: D61510

C;Accession: D61510

C;Accession: D61510

A;Grossberger, D.; Plajnik, M.; Marcuz, A.

Comp. Biochem: Physiol: B 98, 127-133, 1991

A;Title: Ribosomal and chromosomal protein cDNA clones of Xenopus laevis thymus isolated

A;Reference number: A61510; MUID:91284580; PMID:2060276

A;Accession: D61510
A;Status: preliminary
A;Molecule type: mRNA
A;Molecule type: mRNA
A;Residues: 1-49 < GRO>
A;Cross-references: UNIPROT:Q7LZL5; UNIPARC:UP100001771D3
C;Superfamily: nonhistone chromosomal protein HMG-2; HMG box homology

"Solution structure of a DNA-binding domain from HMG1.";
"Nucleic Acids Res. 21:347-3436 (1993).
-!- FUNCTION: Binds preferentially single-stranded DNA and unwinds
double stranded DNA.
-!- SUBCELLUTAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the HMG1/HMG2 protein family.
-!- SIMILARITY: Contains 2 HMG box DNA-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
